PROFESSIONAL PROFILE

Cybersecurity and Digital Forensics Engineering student with hands-on experience in authorized security testing, production security review, web and API security, network security, digital forensics, and CTF labs. Applies structured testing and clear documentation to identify weaknesses across authorization, input handling, authentication, configuration, and logging controls.

EDUCATION

Bachelor of Science in Cybersecurity & Digital Forensics Engineering

University of Dodoma, Tanzania

PRACTICAL SECURITY EXPERIENCE

Industrial Practical Training (IPT) | GreenLeaf Technology Solutions

- Performed authorized security testing and production security review within the approved practical scope.
- Reviewed role-based access control, authorization paths, input validation, API behavior, and security configuration for weaknesses and inconsistent enforcement.
- Assessed CORS behavior, JWT and session handling, security headers, error leakage, logging, and audit controls.
- Documented observations and security considerations to support remediation and safer application behavior.

SELECTED SECURITY PROJECTS & LABS

- Web Security: hands-on testing of authentication, authorization, input validation, session behavior, and common web application security controls.
- Network Security: practical labs focused on network behavior, exposure analysis, and defensive security fundamentals.
- Digital Forensics: structured examination and documentation of digital evidence in practical coursework and labs.
- CTF & Security Labs: challenge-based practice in reconnaissance, vulnerability analysis, exploitation concepts, and evidence-based reporting.

TECHNICAL FOCUS

Application Security: authorized testing, production review, RBAC, authorization, input validation, API security

Security Controls: CORS, JWT, session security, HTTP security headers, error handling, logging, audit controls

Core Areas: web security, network security, digital forensics, CTF and lab-based security practice
